2018 AHEW

The AHEW provides a forum to discuss the use of econometric and other quantitative methods to address issues in health economics and policy, health services research, and outcomes research. It is the first series of meetings of its kind in North America and facilitates the exchange of ideas among the growing health econometrics community.

In this talk, Prof. French will highlight the simultaneity between health and retirement from a structural perspective, describe the mechanisms through which health affects labor supply, and discuss how they interact with public pensions and public health insurance. He will then discuss recent econometric analyses that have aimed to understand causal mechanisms of actions and effect in these relationships.

Prof. Eric French
Eric French is a Professor of Economics at University College London, Co-director, ESRC Centre for the Microeconomic Analysis of Public Policy, Institute for Fiscal Studies, and is a Fellow at the Institute for Fiscal Studies and Centre for Economic Policy Research.

French received a B.A. in economics from the University of California–Berkeley, and M.S. and Ph.D. degrees in economics from the University of Wisconsin–Madison.

French's research interests include: household behavior over the lifecycle; the impact of government and private pensions on savings and labor supply; the impact of health insurance on medical spending, savings, and labor supply; the impact of disability insurance programs on labor supply; the impact of the minimum wage on employment and spending of minimum wage households; and dynamic structural modelling.

Previously he was a senior economist and research advisor on the microeconomics team in the economic research department at the Federal Reserve Bank of Chicago, and taught at the Department of Economics and the Business School at Northwestern University.
